## SILICONE RUBBER TUBING FOR THE DAIRY INDUSTRY

The dairy and agriculture sector demands a highly specific type of Silicone tubing.

With its extreme temperature resilience, excellent elongation and resistance to weathering, silicone is an ideal material for dairy tubing, which is often exposed to the elements and subjected to harsh treatment in the milking parlour. It offers a robust solution perfectly suited to all-weather conditions, no matter how severe.

Quality demands for improved hygiene standards, lifespan and improved milk yields have seen silicone rubber products replace other more traditional tubings across a wide range of applications, predominantly dairy tubing.
