SERVING INDUSTRY SINCE 1947

FLEXIBLE SILICONE SOLUTIONS FOR THE RAIL INDUSTRY

Public transport connects people across the world. From underground and light rail systems, to more recent high-speed rail such as France's TGV and China's HSR systems, rail is one of the most important and busiest modes of transport, especially in highly populated areas.

With this comes the need for **silicone materials** that are durable, reliable and deliver exceptional performance, while meeting the health and safety standards needed to withstand intensive use.

ATAG has been working with silicone for many years. Our silicone rubbers and sponge have been formulated and tested to meet the highest standards associated with the railway industry, including:

- EN45545-2 (HL3)
- NFPA 130 (ASTM E162, ASTM E662, ASTM C1166)
- UL94V0
- NF F-16-101 Cat F0

Rail Applications for Silicone Products

RAIL APPLICATIONS

- ✓ Interior & Exterior LED Seals
- ✓ HVAC Seals & Gaskets
- ✓ Electrical Enclosure Gaskets
- ✓ Interior Door Seals
- ✓ Vibration Dampening
- ✓ Thermal Insulation

Flexible Silicone Solutions for the Rail Industry
