SILICONE RUBBER FOR THE OIL & GAS SECTOR

The oil and gas industry is an industry where the reliability and excellent durability of the materials used ensure a performance that meets the expectations required.

Well-known for its extreme temperature and environmental resistance, silicone rubber is perfectly suitable in oil and gas pipeline construction.

From health and safety equipment through to maintenance and repairs, the level of quality has to be of the highest order to ensure failure is reduced to a minimum. This is where silicone rubber comes into its own, providing a host of appealing properties together with durable, highly resistant and flexible features.

Oil & Gas

Oil & Gas Applications for Silicone Products

OIL & GAS APPLICATIONS

- ✓ Pipeline support gaskets
- ✓ Thermal insulation
- ✓ Seals
- ✓ Vibration Isolation

Silicone Rubber for the Oil & Gas Sector
