

Supports with integrated hydraulic damping

HYDROMOUNTS V E V PLUS SERIES

Properties

- anti-vibration mount with integrated hydraulic damping
- especially suitable when disturbing impulses occur alongside vibrations and a rapid attenuation of the system's vibrations is required
- suitable for power units and equipment with continuous and periodic excitation forces
- provide exceptionally good damping characteristics
- minimize the transfer of vibration in the case of engine, cab and transmission mounts, to cite a few examples

V series

- also suitable for absorbing impact energy
- load, refers to maximum capacity of use: from 10 up to 400 kg

V Plus series

- offer integrated, broad band vertical damping and thus do a good job of damping impacts
- they feature an integrated rebound stop
- load, refers to maximum capacity of use: from 50 up to 250 kg

Applications

- elastic suspension solutions at the highest technical level in all areas of machine, engine and industrial vehicle manufacturing

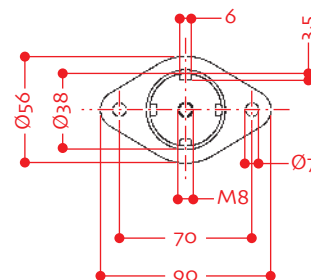

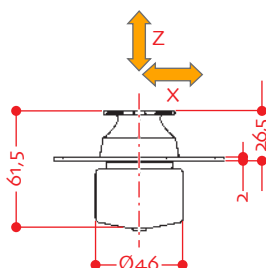

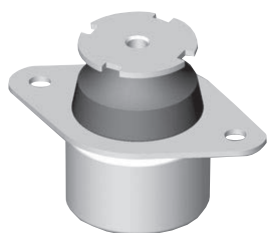

Code - 9AC2HYD....

Material - Rubber/Metal

Hardness - 40 ÷ 65 ° shore A
