

PG PADS

Properties

- allow high vibrational isolations with great versatility and ease of installation
- resolve the problems of elastic foundations, that is the particular type of anti-vibration suspension in which a machine with its own motor and transmission is secured rigidly to an inertial mass, normally in reinforced concrete, that rests on well distributed elastic supports so that they isolate the entire system
- they are notable for their optimum shape that allows it to be inserted under flat based machinery or with wide a support surface.

Applications

- vibration-proof support of machines and equipment of all types

Code - R2PG....

Material - Rubber

Hardness - 40 ÷ 65 °shore A

Reference	Code	Dimension			MAX Load <i>for each section</i>
		H <i>mm</i>	P <i>mm</i>	L <i>mm</i>	
PG 106	R2PG106	35	120	160	2000
PG 107	R2PG107	35	140	140	2000
